The "Cloud" is a natural evolution of distributed computing and the widespread adaption of virtualization and SOA. Services computing is a new cross-discipline subject that covers the science and technology needed to bridge the gap between business services and IT services. In cloud computing, IT-related capabilities and resources are provided as services, via the Internet and on-demand, accessible without requiring detailed knowledge of the underlying technology.

TWSC2 2022 is an important forum for researchers and industry practitioners to exchange information regarding advancements in the state of art and practice of IT-driven cloud computing technologies and services, as well as to identify emerging research topics and define the future directions of cloud and services computing.

TWSC2 2022 will be held on May 19-20, 2022 in Taichung. Topics of interest include, but are not limited to:

- Cloud Computing and Cloud Services
- Cloud Infrastructure
- Cloud Applications
- Cloud Management and Operations
- Cloud Security and Privacy
- Edge Computing Architecture
- Cognitive Radio in Edge Computing
- CPU/GPU and Hardware in Edge Computing
- AI Enabled Edge Computing
- Edge Computing Applications
- Edge Access Networks & Systems
- Sustainable Computing Architecture
- Sustainable Informatics and Optimizations
- Interdisciplinary Application for Sustainability
- Green and pervasive computing
- Sustainable Communication and Security
- Services Computing and Human-Centered Services
- Service QoS, Lifecycle Management, and DevOps
- Scientific Workflows
- Business Process Integration & Management
- Foundations of Services Computing
- Service-oriented architecture
- Services-centric business models
